

The Scotts stabilizer has a very wide range of adjustments. With it's 20 clicks of Low Speed adjustment, High Speed tune ability and multiple sweep settings there is no doubt you will be able to tune the stabilizer for your riding conditions and style.

Low Speed Circuit is adjusted by the external Base Valve Knob and is active when the bars are turned slowly. There are approximately 20 clicks of adjustment. High Speed Circuit is adjusted by the hidden High Speed Valve Screw and is active when the bars are turned quickly. This circuit is extremely sensitive and we recommend leaving it at 1 1/2 turns out. Sweep Control is adjusted by the screws on the side of the unit and allows you to control how far from the centerline out in either direction the unit will dampen. There are 4 different settings.

The SUB Mounted Stabilizer is the latest in stabilizer mounting. This setup mounts the stabilizer below the bars and is a great setup for all applications. The SUB Mount offers a 1" taller bar position for most models. We only deliver the SUB mounted systems, some with the rubber mount kit, like the Beta and KTM 790-1190-1290 models, as shown below.
